

Verisurf Continues Record Sales Performance

Expands global distribution, launches new products and invests in future metrologists.

Anaheim, CA, April 28, 2014

Verisurf Software today announced sales in the first quarter of 2014 increased 35% over the same period in 2013. Verisurf's first quarter success builds on record quarter and year performance achievements set in 2013 and the outlook for Verisurf manufacturing solutions and applications is excellent.

"Our top line results in the first quarter reflect solid execution across all company operations and a modest improvement in global manufacturing," stated Ernie Husted, President and CEO, Verisurf Software, Inc. "we entered 2014 with solid momentum from our growth in 2013 and we are moving forward with a portfolio of products with high customer acceptance of our Model Based Inspection technology, new product launches planned for 2014, increased global expansion and coordinate metrology education. These initiatives will help us capitalize on improving manufacturing market conditions and accelerate Verisurf implementation."

Manufacturers continue to implement Verisurf Model Based Inspection (MBI) technology to speed up production while controlling costs and improving quality. MBI uses 3D CAD models as the nominal definition for rapid inspection, compliance certification and reporting that manufactured parts meet required tolerances.

Verisurf is expanding its international and domestic operations with increased sales, marketing and technical staff by hiring direct employees and select resellers with manufacturing, inspection, tool building and reverse engineering experience.

In 2014 Verisurf will unveil AUTOMATE, a new CMM software that programs and operates CMM's faster, easier and at a lower cost with a 3D CAD measurement platform that automates all types and brands of coordinate measuring machines with an intuitive 3D experience, graphical object oriented programming and open standards that increase freedom of choice.

Verisurf is creating future coordinate metrologists with Verisurf University instructor led and online training programs while expanding educator training and curriculum products for High Schools, Community Colleges and Universities.

About Verisurf Software, Inc.

Verisurf Software, Inc. is a 3D measurement solutions company, committed to delivering advanced computer-aided surface analysis, inspection, tool building, assembly guidance and reverse engineering solutions. Verisurf software helps manufacturers produce higher quality products in less time and at a lower cost with automated, Model-Based processes.
